

POWERLYTE M

ROCKER SHAPE

Searching for the ultimate board our engineers come up with the best combinations of strength, weight, flex, stability and performance. The Santa Cruz Power Lyte is the epitome of technology and innovation.

Designed to shine in all conditions the board deliver features like high speed base, 3ax fibre laminate, Xband carbon stringers, ISA sidewall and last but not least the very new Power Lyte Core.

U-Rocker

The SC U-Rocker in combination with the Power Lyte Core makes you feel like riding on the perfect wave. Straight and true tracking into transitions and jibs. The board response under your feeds so easy and precise as you never experienced before. The U-Rocker in combination with the Power Lyte construction is Santa Cruz's answer for those who ride it all and need a board that take it all. Pure joy riding on pro rider performance level.

Power Lyte Core

A multilayer core sandwiched out of woodcore combined with carbon and fibre laminates. Power Lyte is a lightweight construction keeping maximum strength for power transfer and riding force, provide your board the perfect blend of flex, response and feel. Rider input is channelled from contact point to contact point for maximum board control and power transmission.

Xband Carbon Technology

Multi layer carbon stringer from tip to tail embedded between wood core and fibreglass layers on top and base. Increase the longitudinal strength of the board and improve tractive force along the edge from tip to tail.

3ax fibre laminate

Triax fibre construction woven in three directions makes the board highly responsive and quick turning in each condition. The 3ax gives the board increased strength and durability.

ISA sidewall has been developed for high Impact and shock absorbing strength. The ISA construction give best interaction between steel edge, base and core.

Bevel 1° precision tuning the perfect angle for high performance riding, strong edge contact and icegrip.

STS stainless steel edge with high resistance level and PS interlocking system increase impact strength and lifespan.

	153M	158M
INSERTS	24	24
STANCE WIDTH	580	510
SETBACK	0	0
EFFECTIVE EDGE	1210	1230
CONTACT LENGTH	1190	1210
TIP/TAIL LENGTH	165	175
TIP/TAIL WIDTH	294	298
WAIST WIDTH	250	253
SIDECUT RADIUS (m)	7,3/9,5	7,8/10

ECOFRIENDLY

POWERLYTE W

ROCKER SHAPE

The Power Lyte womens board is an ultra light board with a female specific shape. The board has been designed from the ground up to accommodate the different needs of women riders.
